

SP7021 Quick Start

The simplest installation for the SP7021 board.

Compiler Environment

If you already have a Linux PC (must be 64-bit linux), you can use it directly.

If you don't have a Linux PC, we provide a Linux virtual machine image under windows for you to download.

Linux PC related components

```
make gcc git bison libncurses5-dev flex libssl-dev bc u-boot-tools xz-utils mtools
```

Windows uses Linux virtual machine image

1. Vmware workstation player download

download link:[vmware player workstation player](#)

2. Ubuntu Linux virtual machine image download

download the attachment, unzip tool you must use the 7-zip tool(download link:[7-zip main page](#))

ubuntu18.04-desktop.7z

3. How to use the Linux virtual machine image

Please Refer to:[How to install and use the linux virtual machine image](#)

4. How to download and compile the source code

We provide two source code download addresses, one is github(<https://github.com/sunplus-plus1>) and the other is gitee(<https://gitee.com/sunplus-plus1>).

Please Refer to:[How to build and install SP7021 Linux image to run Raspbian on SD card](#)

If you want to know more technical information, you can see related articles under Application Note:
