

125KHz HID Proximity Card Programmer

Description:

HCP is specially designed for the client who want to program empty card with their own card number, includes different facility code and number. With our user friendly PC software, HCP provide a good solution for programing pre-format card locally. HCP is with USB interface and released with pc software together, it can program 125KHz card to HID proximity card format, such as Clamshell/A20 ISO card and keyfob tag, JAT will provide the pre-format card to client, and client can program the card with real inside card number. The PC software support single card encoding and also auto-continue encoding.
